

North Arlington Middle School Green House

Mrs. Christina Rinzivillo and the sixth graders at the North Arlington Middle School have been busy learning about the process of photosynthesis and the scientific method. Students began this learning experience by planting various seeds in a self-watering container, made from an empty plastic bottle. Each student then transferred their growing plants to our greenhouse and made weekly observations outside in our newly created outdoor classroom. As our plants began to grow, our students were overjoyed and learned more than ever imagined about the process of growing a plant from a seed, the importance of photosynthesis, and the scientific method

This experience could not have been possible without the donations made from Charlie's Nursery (North Arlington), Center Ridge Garden Center (Nutley) The North Arlington PBA, (North Arlington) Scott's Landscaping (North Arlington) Cambridge Paving Stones (Lyndhurst), Condursos Garden Center (Montville) Atlas Tree Services (Lyndhurst)
